Priorities

Style v/s id v/s class v/s tag:

style-tag => style

style-id => style

style-class => style

id-class => id

id-tag => id

class-tag => class

So finally the order of priority becomes

Style – id – class - tag

```html
<!DOCTYPE html>
<html lang="en">
<head>
    <meta charset="UTF-8">
    <meta name="viewport" content="width=device-width, initial-scale=1.0">
    <title>Document</title>
    <link rel="stylesheet" href="./style.css">
</head>
<body>
    <h1  class="head" id="heading" style="color: darkgreen;">Valibasha Nabeesagari</h1>
</body>
</html>
```

```css
