CSS

Day 2

CSS Selectors:

Selector is nothing but select the element which you wanted to style. It tells the browser Which element should this style apply to?

CSS Syntax:

```
selector {
    property: value;
}
```

selector → identifies the HTML element(s).

property → the style property (like color, font-size, etc.).

value → the value you assign to that property.

Types of selectors:

1.Basic/Simple selectors

2.Combination selectors

3.Pseudo class selectors

4.Pseudo element selectors

Types of Basic/Simple Selectors:

1.Element / Tag Selector

- Selects all elements of a specific type (tag name)

Syntax:

```
tagname {
    property: value;
}
```

```html
<body>
    <h1>Hii students</h1>
    <h1>Valibasha</h1>
</body>
```

```css
h1{
    color: white;
    background-color: blue;
}
```

Hii students

Valibasha

2. Class Selector

- Selects elements with a specific **class** attribute.

Symbol : .(dot)

Syntax:

```
.classname {
    property: value;
}
```

```html
<body>
    <div class="card">
        <h1>Namaskram</h1>
        <p>Lorem ipsum dolor sit amet consectetur adipisicing elit.
            Dolor cumque quidem laudantium sit itaque earum voluptatem. Dolorem architecto
             minus praesentium!</p>
        <button>Clickme</button>
    </div>
    <div class="card">
        <h1>Namaskram</h1>
        <p>Lorem ipsum dolor sit amet consectetur adipisicing elit.
             Dolor cumque quidem laudantium sit itaque earum voluptatem. Dolorem
              architecto minus praesentium!</p>
        <button>Clickme</button>
    </div>
    <div class="card">
        <h1>Namaskram</h1>
        <p>Lorem ipsum dolor sit amet consectetur adipisicing elit.
             Dolor cumque quidem laudantium sit itaque earum voluptatem. Dolorem
              architecto minus praesentium!</p>
        <button>Clickme</button>
    </div>
</body>
```

```css
.card{
    width: 300px;
    background-color: cadetblue;
    margin: 10px;
    padding: 5px;
}
```

3.ID Selector

- Selects an element with a unique **id** attribute.

Symbol: #(hashtag)

Syntax:

#idname {

property: value;

}

```
<body>
    <div class="card">
        <h1>Namaskram</h1>
        <p>Lorem ipsum dolor sit amet consectetur adipisicing elit.
            Dolor cumque quidem laudantium sit itaque earum voluptatem. Dolorem architecto
             minus praesentium!</p>
        <button>Clickme</button>
    </div>
    <div class="card" id="discount">
        <h1>Namaskram</h1>
        <p>Lorem ipsum dolor sit amet consectetur adipisicing elit.
             Dolor cumque quidem laudantium sit itaque earum voluptatem. Dolorem
              architecto minus praesentium!</p>
        <button>Clickme</button>
    </div>
    <div class="card">
        <h1>Namaskram</h1>
        <p>Lorem ipsum dolor sit amet consectetur adipisicing elit.
             Dolor cumque quidem laudantium sit itaque earum voluptatem. Dolorem
              architecto minus praesentium!</p>
        <button>Clickme</button>
    </div>
</body>
```

```
.card{
    width: 300px;
    background-color: cadetblue;
    margin: 10px;
    padding: 5px;
}
#discount{
    background-color: orangered;
}
```

4.Group Selector

- Allows styling multiple selectors at once by separating them with commas.

Symbol: ,(comma)

Syntax:

```
selector1, selector2, selector3 {
    property: value;
}
```

```html
<body>
    <h1>Valibasha</h1>
    <h2>Nabeesagari</h2>
    <p>Css is used to styling the webpage today our topic is basic selectors</p>
</body>
```

```css
h1,h2,p{
    color: blueviolet
}
```

Valibasha

Nabeesagari

Css is used to styling the webpage today our topic is basic selectors

5.Universal / Global Selector

- Selects **all elements** on the page.

Symbol: (*)

- Syntax:

```
* {
    property: value;
}
```

```html
<body>
    <h1>Valibasha</h1>
    <h2>Nabeesagari</h2>
    <p>Css is used to styling the webpage today our topic is basic selectors</p>
</body>
```

```css
*{
    color: brown;
    font-family: Impact, Haettenschweiler, 'Arial Narrow Bold', sans-serif;
}
```

Valibasha

Nabeesagari
